The experimental results indicate that the freezing points of IL+H<sub>2</sub>O systems are affected by the nature of both cations and anions. However, according to the COSMO-RS excess enthalpy prediction results, the anions have a relatively higher influence than cations on the IL+H<sub>2</sub>O interaction.

History of use. The use of osmometers began in the late nineteenth century after van't Hoff won a Nobel Prize for his research that discovered that the relationship between the osmotic pressure of dilute colloid solutions and concentration was consistent with the ideal gas law. Since then, osmometers have been used to measure the osmotic strength of a dilute solution at different levels of ...

### Freezing point depression osmometer - Wikipedia

Explanation. The freezing point is the temperature at which the liquid solvent and solid solvent are at equilibrium, so that their vapour pressures are equal. When a non-volatile solute is added to a volatile liquid solvent, the solution vapour pressure will be lower than that of the pure solvent.

### What Freezing Point Depression Is and How It Works

The freezing point of the solvent of the solution changes as the concentration of the solute changes in the solution. The extent of the freezing point depression depends on the concentration, and the following relation holds for ideal dilute solutions:  $M = 1000 K_f g \Delta T_f$  Where  $M$  = molecular weight  $K_f$  = cryoscopic constant  $g$  = grams of solute  $G$  = grams of solvent  $\Delta T_f = \Delta$  freezing point depression In the experiment Beckmann differential thermometer is used to determine the freezing ...

### Molecular Weight Determination by Freezing point depression

The equation that shows this relationship is: where  $\Delta T$  is the freezing point depression,  $K_f$  is the freezing point depression constant for a particular solvent (3.9°C·kg/mol for lauric acid in this experiment 1), and  $m$  is the molality of the solution (in mol solute/kg solvent).

### Using Freezing Point Depression to Find Molecular Weight ...

At the freezing point, the vapor pressure of both the solid and liquid form of a compound must be equal. The freezing point of a substance is the temperature at which the solid and liquid forms are in equilibrium. To reattain equilibrium, the freezing point of the solute and solvent mixture is lowered relative to the original pure solvent.

### Freezing Point Depression | Introduction to Chemistry

A new method for the determination of freezing point depression is described. The method avoids errors due to supercooling and changes in concentration of the solution. A Heidenhain thermom- eter is used for simplicity. In a depression greater than 0.020' an accuracy of f0.001' is estimated.
