exponents will help. Note: the caret symbol \wedge indicates an exponent. For example, 4^3 means 4 to the 3rd power.

Quia - Exponents

Next, there are two exponent rules that you can use to simplify the expression further: (1) you can distribute the exponents over each factor in the numerator and the denominator, and (2) you can use the power rule, $(x^a)^b = x^{a \cdot b}$. Keep in mind that the a in the numerator is equivalent to a^1 because anything to the first power is itself.

Exponents Practice Questions - Study Guide Zone

The second question results in a negative exponent, so I ask students to rewrite with positive exponents. Once the timer sounds, I explain to students that are going to review each of the rules we have learned during this unit in preparation for today's quiz.
