A URL that is triggered by an event, for example, a file upload. A target URL MUST be unique for each project — event type combination. event, event type. An event you subscribe to. Presently, we only support the file.uploaded event. is_active, boolean, optional. Marks a subscription as either active or not, defaults to true.

REST API Webhooks | Uploadcare Docs

Polling an API is generally a wasteful and messy way of trying to retrieve that piece of information. Some events may only happen once in a while, so you have to figure out how often to make the polling calls, and you might miss it. Don't call us, we'll call you! Well webhooks are the answer.

Webhooks do's and dont's: what we ... - The RESTful Web

In the REST API apps section, click the link for the app to which you want to subscribe events. In the webhooks section, click Add Webhook . Add the URL for your listener, which is the endpoint URL that listens for incoming HTTP POST notification messages triggered when events occur.

Webhooks - PayPal Developer

The PayPal REST APIs use webhooks for event notification. Overview. Webhooks are HTTP callbacks that receive notification messages for events. To create a webhook at PayPal, users configure a webhook listener and subscribe it to events. A webhook listener is a server that listens at a specific URL for incoming HTTP POST notification messages that are triggered when events occur. PayPal signs each notification message that it delivers to your webhook listener.
